Medical Scales

There are various types of scales today which are used for weighing the overall weight of a person today. They are known as **physician scales**, **doctor scales**, **scales for wheelchairs** and **bathroom scales**. With so many different types of scales it can be extremely difficult for people to distinguish between them. The medical scales often found in doctors' offices are known as **physician's scales**. However many doctors have started to keep advanced and upgraded digital scales in offices which are known as **doctor's scales**, but some promote the use of traditional scales.

Paediatricians also use scales known as baby scales, to measure the weight of the baby and its growth. It is an effective tool which can be used to determine the health of a child and is therefore available at every paediatrician's office. Some doctors have wheelchair scales, also known as **scales for wheelchairs** in their offices. The scale is designed to accommodate the entire wheelchair and the person sitting in the chair and is used to measure the weight of disabled people

accurately.

There are other types of scales as well such as bariatric scales, which have the unique ability to read weights of up to 1000lbs! They come in hand in exceptional cases or when patients need to be weighed after a surgery. There are even liquid and food scales for people, who are on a strict diet plan and want to measure the exact amount of food and liquid they are consuming on a daily basis. The most common type of scales are undoubtedly the **bathroom scales** which are usually found in the homes of people, who want to keep a check on their weight and who like to be informed about their overall weight regularly.

Medical scales of all sorts are necessary whether they are being used in the doctor's office or the home. It is a vital piece of equipment, which allows people to keep records of their health and fitness. The different variety of medical scales has made it possible for doctors, patients and even the common man to help determine the health of their body accurately.

There is a very wide array of medical scales, ranging from **doctor's scales**, to **bathroom scales**, to **scales for wheelchairs** and even **physician scales**. Each one is different and offers something unique to the user, no matter who that person is or how qualified they are.

Keyword: Doctor scales, Physician scales, bathroom scales and scales for wheelchairs.
